PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/038,431	Applicant(s) TRIVEDI ET AL.	
	Examiner AIMEE J. LI	Art Unit 2183	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).

Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) ☒ Responsive to communication(s) filed on 02 September 2008.

2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.

3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) ☒ Claim(s) 1-7, 9-18, 20-32 and 34-41 is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5) ☐ Claim(s) _____ is/are allowed.

6) ☒ Claim(s) 1-7, 9-18, 20-32 and 34-41 is/are rejected.

7) ☐ Claim(s) _____ is/are objected to.

8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) ☐ The specification is objected to by the Examiner.

10) ☒ The drawing(s) filed on 31 December 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) ☐ All b) ☐ Some * c) ☐ None of:

1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☐ Notice of References Cited (PTO-892)

2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.

4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.

5) ☐ Notice of Informal Patent Application

6) ☐ Other: _____.

DETAILED ACTION

1. Claims 1-7, 9-18, 20-32, and 34-41 are pending. Claims 1, 12, 23, 25, and 26 have been amended as per Applicant's request.

Papers Submitted

2. It is hereby acknowledged that the following papers have been received and placed of record in the file: Amendment as filed 02 September 2008.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3, 5-7, 9-14, 16-18, 20-28, 30-32, 34-38, and 40-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chehrazai et al., U.S. Patent No. 6,282,556 (herein referred to as Chehrazai) in view of Mennemeier et al., U.S. Patent No. 6,036,350 (herein referred to as Mennemeier).

5. Regarding claims 1, 12, 23, 25, and 26, taking claim 1 as exemplary, Chehrazai has taught a method for execution by a microprocessor in response to receiving a single instruction (Chehrazai Col.20 lines 42-52), the method comprising:

- a. Receiving a first vector of numbers from a first entry in a register file and a second vector of numbers from a second entry in the register file (Chehrazai 310 of Fig.20B, Col.20 line 62 – Col.21 line 1);

- b. Selecting a first plurality of numbers of the first vector from the first entry (Chehrazi 310 of Fig.20B, Col.20 line 62 – Col.21 line 1) and a second plurality of numbers of the second vector from the second entry (Chehrazi 312 of Fig.20B, Col.20 line 62 – Col.21 line 1) according to a configuration specified by the instruction (Chehrazi 560 of Fig 20A, Col.20 line 42 – Col.21 line 13), and
 - c. Generating simultaneously a third plurality of numbers, each of which is an absolute difference between a number in the first plurality of numbers and a number in the second plurality of numbers (Chehrazi Col.21 lines 6-12),
 - d. Wherein the sum of third plurality of numbers are saved in a third entry in the register file (Chehrazi Col.20 lines 47-58),
 - e. Wherein the above operations are performed in response to the microprocessor receiving the single instruction, wherein the single instruction indicates the first entry for the first plurality of numbers, the second entry for the second plurality of numbers, and the sum for the third plurality of numbers in the register file (Chehrazi Col.20 lines 42-52, 61-62).
6. Chehrazi has not explicitly taught wherein the third plurality of numbers themselves are saved in an entry in a register file. However, Mennemeier has taught storing a third plurality of numbers, specifically a vector of absolute differences, in a instruction specified register (Mennemeier, Col.7 line 64 – Col.8 line 23) so that the absolute differences can be used in other operations that require the distance assessment that the results represent (Mennemeier, Col.8 line 21-23). One of ordinary skill in the art would have recognized that it is desirable to retain results that will be used by future instructions so that the results don't need to be recalculated.

Therefore, one of ordinary skill in the art would have found it obvious to modify the processor of Chehrazi to store the absolute differences, rather than the sum of the absolute differences, in an instruction specified register so that the values could be reused by other operations that require the data, thus improving throughput by avoiding the recalculation of the data.

7. Claims 12, 23, 25, and 26 are nearly identical to claim 1. However, Chehrazi has taught the differences. Claim 12 differs in the claim being comprised within a machine-readable media (Chehrazi Col.20 lines 42-46), while claims 23, 25, and 26 differs in the claims being comprised within an execution unit (Chehrazi Col.7 lines 20-40). Also, claim 23 claims wherein the microprocessor is a media processor disposed on an integrated circuit with a memory controller (Chehrazi column 5, lines 43-54). Besides these differences, the claims encompass the same scope as claim 1. Thus, claims 12, 23, 25, and 26 are rejected for the same reasons as claim 1.

8. Regarding claims 2, 13, 24 and 27, taking claim 2 as exemplary, Chehrazi has taught a method as in claim 1, wherein an absolute difference between a first number and a second number is computed using a method comprising:

- a. Producing a first intermediate number by subtracting the second number from the first number (Chehrazi Col.21 lines 1-8),
- b. Producing a second intermediate number by subtracting the first number from the second number (Chehrazi Col.21 lines 1-8),
- c. Selecting a positive number from the first intermediate number and the second intermediate number as the absolute difference between the first number and the second number (Chehrazi Col.21 lines 8-12),

- d. Wherein the microprocessor is a media processor (Chehrazi 108 of Fig.1, Col.3 lines 6-7) disposed on an integrated circuit with a memory controller (Chehrazi 100 of Fig.1, Col.5 lines 46-54).
9. Claims 13, 24 and 27 are nearly identical to claim 2. Claim 13 lacks the recitation of a media processor disposed on an integrated circuit with a memory controller, and claims 13, 24 and 27 differ in their parent claims, but encompass the same scope as claim 2. Thus, claims 13, 24 and 27 are rejected for the same reasons as claim 2.
10. Regarding claims 3, 14 and 28, taking claim 3 as exemplary, Chehrazi has taught a method as in claim 2, wherein the first intermediate number and the second intermediate number are produced in parallel (Chehrazi Col.21 lines 1-8), and wherein the third plurality of numbers are generated substantially simultaneously (Chehrazi Col.21 lines 8-12).
11. Claims 14 and 28 are nearly identical to claim 3, both differing in their lack of having the third plurality of numbers being generated substantially simultaneously, as well as differing in their parent claims, but both encompass the same scope as claim 3. Thus, Claims 14 and 28 are rejected for the same reasons as claim 3.
12. Regarding claims 5, 16 and 30, taking claim 5 as exemplary, Chehrazi has taught a method as in claim 1, wherein the first plurality of numbers are received from a first entry in the register file (Chehrazi Col.20 lines 47-58).
13. Claims 16 and 30 are nearly identical to claim 5, differing in their parent claims, but encompassing the same scope as claim 5. Thus, claims 16 and 30 are rejected for the same reasons as claim 5.

14. Regarding claims 6, 17 and 31, taking claim 6 as exemplary, Chehrazi has taught a method as in claim 5, wherein the single instruction specifies a way to partition a string of bits in the first entry into a first plurality of numbers (Chehrazi Col.20 lines 61-65). Here, the SABD instruction specifies a register in the register file, which corresponds to the plurality of numbers, and specifies that the data in the register be interpreted to be 16 separate 8-bit numbers.

15. Claims 17 and 31 are nearly identical to claim 6, differing in their parent claims, but encompassing the same scope as claim 6. Thus, claims 17 and 31 are rejected for the same reasons as claim 6.

16. Regarding claims 7, 18 and 32, taking claim 7 as exemplary, Chehrazi has taught a method as in claim 5, wherein the single instruction specifies an index of the entry in the first register file (Chehrazi 560c and 560d of Fig.20a, Col.20 lines 47-58).

17. Claims 18 and 32 are nearly identical to claim 7, differing in their parent claims, but encompassing the same scope as claim 7. Thus, claims 18 and 32 are rejected for the same reasons as claim 7.

18. Regarding claims 9, 20 and 34, taking claim 9 as exemplary, Chehrazi in view of Mennemeier has taught a method as in claim 1, wherein the single instruction specifies an index of the entry in a the register file (Mennemeier, Col.7 line 64 – Col.8 line 23, as well as above paragraph 39).

19. Claims 20 and 34 are nearly identical to claim 9, differing in their parent claims, but encompassing the same scope as claim 9. Thus, claims 20 and 34 are rejected for the same reasons as claim 9.

20. Regarding claims 10, 21 and 35, taking claim 10 as exemplary, Chehrazi has taught a method as in claim 1, wherein a type of each of the first and second pluralities of numbers is one of:

- a. Unsigned integer (Chehrazi Col.20 lines 54-55),
- b. Signed integer (Chehrazi Col.20 lines 54-55),
- c. Floating-point number.

21. Here, because the claim is written in the alternative format, only one of the three possible limitations is required to be met. Thus, Chehrazi has taught the limitations of claim 10.

22. Claims 21 and 35 are nearly identical to claim 10, differing in their parent claims, but encompassing the same scope as claim 10. Thus, claims 21 and 35 are rejected for the same reasons as claim 10.

23. Regarding claim 11, 22 and 36, taking claim 11 as exemplary, Chehrazi has taught a method as in claim 1, wherein a size of each of the first and second pluralities of numbers is one of:

- a. 8 bits (Chehrazi Col.20 lines 61-65),
- b. 16 bits,
- c. 32 bits.

24. Here, because the claim is written in the alternative format, only one of the three possible limitations is required to be met. Thus, Chehrazi has taught the limitations of claim 11.

25. Claims 22 and 36 are nearly identical to claim 11, differing in their parent claims, but encompassing the same scope as claim 11. Thus, claims 22 and 36 are rejected for the same reasons as claim 11.

26. Regarding claim 37, Chehrazi has taught wherein a type of each of the first and second pluralities of numbers is floating point number (Chehrazi column 1, lines 19-21 and column 9, lines 37-41).

27. Regarding claim 38, Chehrazi has taught wherein the microprocessor is a media processor disposed on an integrated circuit with a memory controller (Chehrazi column 5, lines 43-54).

28. Regarding claim 40, Chehrazi has taught wherein the memory controller is usable to access memory not disposed on the integrated circuit (Chehrazi Col. 5 lines 36-60 and Figure 1). As can be seen in Chehrazi's Figure 1, the ROM and RAM memories and data storage device are separate from the processor.

29. Regarding claim 41, Chehrazi has taught wherein the memory controller is usable by a host central processing unit not disposed on the integrated circuit to access the memory (Chehrazi Col. 5 lines 36-60 and Figure 1). As can be seen in Chehrazi's Figure 1, the ROM and RAM memories and data storage device are separate from the processor.

30. Claims 4, 15, 29, and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chehrazi et al., U.S. Patent No. 6,282,556 (herein referred to as Chehrazi) in view of Mennemeier et al., U.S. Patent No. 6,036,350 (herein referred to as Mennemeier) as applied to claims 1, 2, 12, 26, and 27 above, and further in view of Diefendorff et al., EPO 0 485 776 A2 (herein referred to as Diefendorff).

31. Regarding claims 4, 15, 29, and 39, taking claim 4 as exemplary, Chehrazi has taught taking an absolute difference between a first number and a second number (Chehrazi Col.21 lines 6-12). Chehrazi has not taught:

- a. Testing if an overflow occurs in producing the first intermediate number and the second intermediate number,
 - b. Saturating the difference between the first number and the second number if an overflow occurs.
32. Diefendorff has taught
- a. Testing if an overflow occurs in producing the first intermediate number and the second intermediate number (Diefendorff column 6, lines 42-46; column 11, lines 38-41; column 11, line 56 to column 12, line 12; and Figure 5),
 - b. Saturating the difference between the first number and the second number if an overflow occurs (Diefendorff column 6, lines 42-46; column 11, lines 38-41; column 11, line 56 to column 12, line 12; and Figure 5).
33. A person of ordinary skill in the art at the time the invention was made would have recognized, and as taught by Diefendorff, that overflow testing and saturation arithmetic improves the handling of overflow conditions during shading or image processing, thereby improving the quality of the image and accelerating the performance of the microprocessor during shading and image processing. Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the overflow testing and saturation arithmetic of Diefendorff in the device of Chehrizi to improve image quality and accelerate the performance of a microprocessor during shading and image processing.

Response to Arguments

34. Applicant's arguments filed 08 September 2008 have been fully considered but they are not persuasive.

35. Applicants' argue in essence on pages 15-19 "Thus, neither Chehrazi, nor Mennemeier, discloses such limitations of amended claim 1." This has not been found persuasive. Chehrazi has taught a single vector instruction using a first vector and a second entry and storing the result of the single instruction in a destination register. However, Chehrazi's result is the sum of the absolute differences. Mennemeier teaches that certain operations want to use the saved results of an absolute difference operation between two vectors. Combining the two references together would suggest to a person of ordinary skill in the art to not only save the absolute difference vector, but also to save this vector in a destination vector register indicated by the single instruction. Applicants' arguments appear to be arguing literally importing the teachings of Mennemeier into Chehrazi instead of taking into consideration what the combination would have suggested to a person of ordinary skill in the art. The test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981).

36. Applicants argue in essence on page 17

It is respectfully submitted that Chehrazi does not teach or suggest a combination with Mennemeier, and Mennemeier does not teach or suggest a combination with Chehrazi. Chehrazi addresses the pipelined data path architecture. Mennemeier, in contrast, addresses sorting the signed numbers. It would be impermissible hindsight, based on applicants' own disclosure, to combine Chehrazi and Mennemeier.

37. This has not been found persuasive. This argument appears to be arguing that it would be impermissible hindsight to combine Chehrazi and Mennemeier due to the two references being

in two non-analogous arts. However, that is simply not true. Chehrazi and Mennemeier both teach computer systems that operate upon vector data. In fact, Chehrazi and Mennemeier both teach computer systems that perform an absolute difference operation on vector data. Therefore, Chehrazi and Mennemeier are in analogous arts.

38. Also, in response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

Conclusion

39. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

40. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

41. Any inquiry concerning this communication or earlier communications from the examiner should be directed to AIMEE J. LI whose telephone number is (571)272-4169. The examiner can normally be reached on M-T 7:00am-4:30pm.
42. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie Chan can be reached on (571) 272-4162. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
43. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
